Exam : **P2070-053**

Title : IBM FileNet P8 Product
Fundamentals Technical
Mastery Test v1

Vendor : IBM

Version : DEMO

NO.1 An administrator is preparing to update all IBM FileNet P8 components with a new Content Engine client fix pack.

The installation and upgrade worksheet will be used to gather values for the client update.

What must be done to filter the worksheet for Content Engine client installer values only?

- A. Verify that row filtering is enabled.
- B. Verify that column filtering is enabled.
- C. Verify that row and column filtering is enabled.
- D. Verify that the Data > Filter > AutoFilter command is enabled.

Answer: D

NO.2 Which is NOT a characteristic of a workflow definition?

- A. It is a graphical map showing the sequences of steps needed to complete the business process
- B. Contains roles to specify which users can access specific types of work flows
- C. It is a specification of each step, including who will process the work for the step, which step processor application the participant will use, which attachments are required, what data is necessary, what responses the participant can choose, and other options.
- D. Contains routing logic that specifies how work advances from one step to the next

Answer: B

NO.3 While implementing a FileNet P8 solution, you would like to make content addition to the FileNet ECM repository easy, intuitive and productive to end users. The proposed solution should address requirements such as allow documents of a specific type to be added to a given folder, hide certain properties from the user when entering metadata for the document, and apply pre-configured security to documents. Which of the following techniques best addresses these requirements?

- A. Use the default Add Document functionality provided in the IBM Content Navigator
- B. Use a Search Template
- C. Use a Document Entry Template
- D. Use a Form Policy Document

Answer: C

NO.4 Where are the application server logs located in a typical IBM WebSphere CPE installation?

- A. install_root/profiles/<profile-name>/logs/<server-name>
- B. install_root/user_projects/domains/<domain-name>/servers/<server-name>/logs
- C. install_root/server/<server-name>/log
- D. <Deployed_CPE_home_dir/FileNet/<server-name>

Answer: A

NO.5 When installing and deploying Workplace XT across four nodes, at a single site in a highly available configuration (i.e. J2EE application cluster), which of the following two statements follows IBM's best practices?

- A. Install Workplace XT on a single node only.
- B. Store all configuration information in the EAR file.

- C. Install Workplace XT on all four nodes independently.
- D. Use a shared file system for configuration files used by all four nodes.
- E. Install Workplace XT on a network file system that is shared by all four nodes.

Answer: C,D

NO.6 In which of the following situations should you use sub maps in a work flow?

- A. They can be used to implement simple work flows that have 4 or fewer steps
- B. They can be used to breakdown complex work flows into more manageable pieces
- C. They can be used to encapsulate all tasks in a work flow allowing the main map to hide details
- D. B and C

Answer: D

NO.7 Which one of the following is NOT a function of the FileNet Process Configuration Console?

- A. Configure workflow subscriptions
- B. Configure component queues
- C. Configure work queues
- D. Configure the event logs

Answer: A

NO.8 As part of a new IBM FileNet P8 installation an installer is configuring SSL between the Process Engine and the Content Engine. The installer runs the following command to import the CA certificate to the Java keystore: `\PE_installation_directory\java\jre\bin\keytool -import -file <cert_file_name> -alias <alias> -keystore cacerts -storepass <password>` What is the default password?

- A. cacert
- B. changeit
- C. password
- D. change\$_this_obnoxious_passwr

Answer: B

NO.9 An instance of IBM Content Search Services server has been successfully installed. To verify the installation, the deployment specialist needs to check the value of the authentication token that was generated by the installation procedure, based upon the supplied seed, and then manually record it for later use. How can this be accomplished?

- A. Inspect the installation log file - the token is recorded there.
- B. Use the supplied configTool command line utility to display the value of the token.
- C. Use the supplied adminTool command line utility to display the value of the token.
- D. Use the supplied dumpIndex tool to recover the configuration information (including the token).

Answer: B

NO.10 The CE has discoverable, self-describing meta data. Which of the following things can NOT be discovered through CE meta data?

- A. The hierarchy of document classes and the point in the hierarchy at which custom properties are added to classes.

- B. The path to individual content elements stored in a file system.
- C. The names of database tables and columns where custom property values are stored.
- D. Information about referential integrity checks that will be performed by the CE server when creating, updating, or deleting objects.

Answer: B

NO.11 Which of the following is NOT a standard, out-of-the-box feature of P8 security?

- A. There is a mechanism for default permissions by document class.
- B. There is a mechanism for automatically adjusting permissions during checkout/checkin cycles.
- C. Security can be modified individually on business objects.
- D. There is a mechanism for automatically adjusting permissions based on date and time.

Answer: D

NO.12 What is the recommended size of the nursery within the CPE jvm in relation to heap size?

- A. The same as heap
- B. Half the size of heap
- C. Twice the size of heap
- D. There is no correlation between the two

Answer: B

NO.13 A customer is upgrading from IBM FileNet P8 V4.5.1 to P8 V5.1. Currently they use IBM Legacy Content Search Engine (LCSE) for content indexing on a standalone LCSE server. The customer is migrating to IBM Content Search Services (CSS) as part of the upgrade. Which of the following is true ?

- A. They must upgrade to LCSE V5.0 before they can migrate to CSS.
- B. They must install CSS on it's own server because of the performance degradation of re-indexing jobs.
- C. Indexes from the current LCSE are not available once they start the indexing process on the new CSS server.
- D. They must determine whether they will be using Workplace XT or Workplace (default application engine) to successfully configure CSS functionality.

Answer: A

NO.14 A security administrator has been assigned the task of creating a Content Engine bootstrap account. The account must be able perform the following task: establish a connection to the application server, access the JNDI lookup tree and lookup the data source for accessing the GCD. What other function does the Content Engine bootstrap account need to perform?

- A. Create the data sources for the GCD.
- B. Startup the Content Engine application.
- C. Startup the Content Engine background tasks.
- D. Startup the Content Engine application server.

Answer: C

NO.15 What is Administration Console for Content Platform Engine (ACCE) replacing?

- A. System Manager
- B. Configuration Manager
- C. Deployment Manager
- D. FileNet Enterprise Manager

Answer: D
